186 INGREDIENT GLOSSARY

REDKEN IS THE LEADING *PROFESSIONAL* BRAND

Backed by state-of-the-art science and a legacy of innovation that dates back to 1960.

Started by a Hollywood actress and her hairdresser, we were the first company to take a scientific approach to hair and discover the formula that remains the alpha and omega of haircare to this very day: **PROTEIN + MOISTURE + ACIDIC pH = HEALTHY HAIR.**

Our groundbreaking research revolutionized the haircare industry, propelling Redken to the top of the US professional market. **Today, we are trusted by more than a million hair professionals in the US alone.**

Combining scientific rigor with an elevated aesthetic, we are known to create scientific hair prescriptions to deliver powerful hair transformations that preserve the health of the hair for performance-obsessed professionals and their clients all around the world.

THE REDKEN COLOR MANTRA

OUR *UNIQUE* APPROACH TO HAIRCOLOR

APPLY IN ZONE. MAXIMIZE COLOR RESULTS. MINIMIZE STRESS ON HAIR.

Redken uses the term “Zones” to refer to different areas of the hair strand.

Understanding Zones will help you achieve pHenomenal, even color results every time!

ZONE 1: Regrowth or root area, approximately the first ½ inch of hair

ZONE 2: Mid-shaft area, begins where Zone 1 ends

ZONE 3: Overly porous hair that extends past the shoulders (not all hair has a Zone 3)

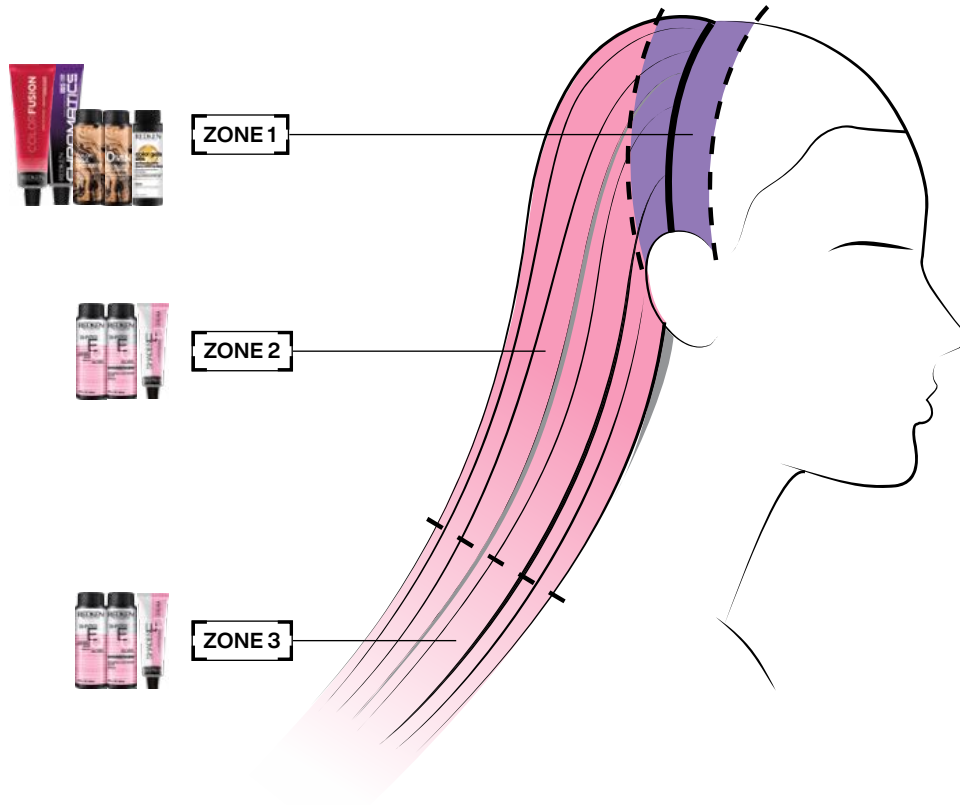

WE APPLY COLOR IN ZONES BASED ON pH SCIENCE BECAUSE:

Each Zone accepts color differently based on the condition of the hair

We care for the integrity of even the most sensitized parts of the hair

The combination of alkaline and acidic color maximizes color results and minimizes stress on hair

Alkaline color should only touch virgin hair. Use any alkaline color formula on **Zone 1**. Always use acidic **Shades EQ** color on **Zones 2 and 3** for amazing condition and shine while maintaining maximum respect for previously-colored hair.

TECHNICAL INFORMATION

PRE-SERVICE BEST PRACTICES

BEFORE YOU BEGIN ANY CHEMICAL SERVICE

- Precisely follow package instructions for haircolor, lightener and texture products
- Wear suitable gloves for all applications
- Perform necessary allergy tests as outlined in the directions
- Utilize protective smocks or capes for you and your clients during the service

SKIN ALLERGY TEST

PERFORM A SKIN ALLERGY TEST BEFORE EACH USE OF HAIRCOLOR, AS ALLERGIES CAN DEVELOP SUDDENLY, EVEN THOUGH YOUR CLIENT HAS PREVIOUSLY USED A HAIRCOLOR FROM THIS BRAND OR ANOTHER.

If your client has a tattoo, the risk of an allergic reaction may be increased.

SKIN ALLERGY TEST INSTRUCTIONS

- Use soap and water to clean an area the size of a quarter in the bend of your client's elbow. Pat dry
- Using a plastic utensil, mix the following ratios of color in a plastic or glass container, then tightly recap the hair colorant and developer. Do not use metal utensils

FOR PERMANENT HAIRCOLOR:

Mix ½ oz. of color and ½ oz. 20 vol. of the dedicated developer

FOR DEMI-PERMANENT HAIRCOLOR:

½ oz. **Shades EQ Gloss/Bonder Inside** and ½ oz. **Shades EQ Processing Solution**

½ oz. **Shades EQ Cream/Cover Plus** and ½ oz. 10 vol. **Pro-oxide Cream Developer**

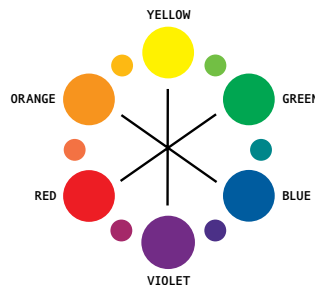

1. Apply mixture to the test area with a cotton swab or ball
2. Let test spot dry. Instruct client not to wash, cover or disturb for 45 hours
3. Instruct client to examine test area periodically over the next 45 hours. If he/she experiences any reactions such as redness, burning, itching, swelling, skin abrasions, eruptions or irritation in or around the test area, **DO NOT COLOR YOUR CLIENT'S HAIR UNTIL THEY HAVE CONSULTED A DOCTOR**

STRAND TEST

Haircolor may be readily accepted by porous hair that has been chemically treated or damaged from environmental exposure or heat styling. Always conduct a preliminary strand test to determine how the hair will accept color. Apply the formula to a small section of hair and process according to instructions; adjust the formula accordingly.

COLOR WHEEL

Every tone and color relationship is defined within the Color Wheel. Colors that are opposite of one another counteract warmth and result in neutralization.

LEVEL SYSTEMS

- The **Traditional Level System** offers more increments of color at darker levels, providing more options for gray coverage while maintaining reflect.
- Keep in mind that no level system is universal. The principles, however, are universal.
- The **American Level System** offers more increments of lighter brown shades between levels 2 and 6, allowing for more color formulation at levels 3, 4 and 5.

WORKING WITH UNDERTONES

Undertones are the unrefined warm tones exposed during the lifting process. Always consider the exposed undertones visible at the target level. To counteract undertones, use the **Color Wheel** to select a shade level with tonal value opposite to the undertone exposed at the target level. Remember, opposites neutralize. To enhance undertones, select a shade with a tonal value similar to the undertone exposed at the target level.

BACKGROUND COLOR AND TONE

Background is the portion of the color base that helps produce balanced, natural-looking results and gives the shade its foundation. Tone is the portion of the base that gives a shade its unique character.

FORMULATION GUIDELINES

1. Determine your client's **natural haircolor level**. Remember to consider percentage of gray, hair texture, condition and hair density.
2. Determine the **target color** (final level and tone) desired by your client.
3. Determine the **undertone** found at the target level (refer to **Level System**). This step does not apply to **Shades EQ Gloss, Shades EQ Bonder Inside**.
4. Select the shade to enhance, balance or counteract undertones and achieve the target color.

BEST PRACTICES

1. Pre-treat the hair with **Pre Art** and **Hair Cleansing Cream**. Follow with **Extreme CAT** as needed. Dry hair.
2. Apply color generously using fine ¼ inch diagonal partings.
3. Use the opposite diagonal to crosscheck and ensure proper application.
4. Use a timer for accurate timing. Do not over or under-process.

When lifting or lightening natural hair, the scalp area will always be warmer/brighter and the mid-shaft and ends will appear darker and drabber. To ensure even color from scalp to ends, create formulas with the appropriate family shades.

ON-SCALP APPLICATION

1. Start with dry hair. Divide into 4 sections.
2. Use a bowl and brush or bottle. Apply color taking ¼ inch partings for even saturation.
3. Process as directed (refer to Mixing and Processing charts).
4. Rinse. Shampoo with **Hair Cleansing Cream**, **Extreme** or **Color Extend Magnetics**. Condition with **Extreme** or **Color Extend Magnetics**.

VIRGIN HAIR

According to the Principles of Haircolor, color lifts lighter and brighter in Zone 1. To compensate, two alternatives are possible when applying color to virgin hair:

TRADITIONAL VIRGIN APPLICATION

Consists of adjusting the formula with a **higher volume developer** in **Zone 2**, starting the application in **Zone 2** and finishing with **Zone 1**.

EXAMPLE USING CHROMATICS:

Zone 1 Formula: 5N (5.0) **Chromatics** + 20 vol. **Chromatics Oil in Cream** Developer

Zone 2 Formula: 5N (5.0) **Chromatics** + 30 vol. **Chromatics Oil in Cream** Developer

1. Apply selected formula to **Zone 2** (the mid-shaft).
2. Immediately apply to **Zone 1** (the scalp area) the formula with the lower developer. Begin processing time after the **Zone 1** application is complete.
3. Process at room temperature for 35 minutes.
4. Rinse and shampoo with **Hair Cleansing Cream**, **Extreme** or **Color Extend Magnetics**. Condition with **Extreme** or **Color Extend Magnetics**.

MODERN VIRGIN APPLICATION

Consists of using a **lighter and warmer formula** in **Zone 2**, applying color to **Zone 1** first, and then to **Zone 2**.

EXAMPLE USING COLOR FUSION:

Zone 1 Formula: 5N **Color Fusion** + 20 vol. **Pro-oxide Cream** Developer

Zone 2 Formula: 6GB **Color Fusion** + 20 vol. **Pro-oxide Cream** Developer

1. Apply selected formula to **Zone 1** (the scalp area).
2. Immediately apply to **Zone 2** (the mid-shaft) the slightly lighter and warmer formula.
3. Begin processing time after the **Zone 2** application is complete.
4. Process at room temperature for 35 minutes.
5. Rinse and shampoo with **Hair Cleansing Cream**, **Extreme** or **Color Extend Magnetics**. Condition with **Extreme** or **Color Extend Magnetics**.

REFRESH

Apply selected formula to **Zone 1**.

REFRESH ZONES 2 AND 3

RECOMMENDED SHADES EQ GLOSS TO REFRESH ALL PERMANENT HAIRCOLOR

While using permanent haircolor on the regrowth (**Zone 1**), apply **Shades EQ Gloss** to **Zone 2** and process at room temperature for 20 minutes. If **Zone 3** is present, dilute formula with **Shades EQ Gloss** or **Shades EQ Bonder Inside Crystal Clear** and strand test for proper deposit.

GLOSS OR CORRECT

1. Apply **Shades EQ Gloss** or **Shades EQ Gloss Bonder Inside** to **Zone 1**, taking ½ inch partings.
2. Apply and fully saturate **Zone 2**, taking ¼ inch partings.
3. Process as directed (refer to Mixing and Processing charts).
4. Rinse, shampoo and condition with **Extreme** or **Color Extend Magnetics**.

ADVANCED BLENDING OR COVERING GRAY

Refer to each brand for specific guidelines.

OFF-SCALP APPLICATION

WEAVE OR HIGHLIGHTS

After wrapping the last foil, process as directed (refer to Mixing and Processing charts). Rinse and shampoo with **Hair Cleansing Cream**, **Extreme** or **Color Extend Magnetics**. Condition with **Extreme** or **Color Extend Magnetics**.

LOWLIGHTS

Isolate strands in a foil or paint freehand. Strand test for proper deposit. Formulas should be slightly lighter than natural level and include some warmth.

FORMULATION GUIDELINES

- Determine your client’s natural hair color level using the **Color Gels Oils** Natural (NN) family swatches found in the swatch book. Remember to consider percentage of gray, hair texture, condition, and hair density.
- Determine the target color (final level and tone) desired by your client.
- Determine the undertone found at the target level (see Color Wheel).
- Select the **Color Gels Oils** shade to enhance, balance or counteract undertones and volume of developer needed to achieve the target color.

FORMULATION EXAMPLE FOR LIFTING NATURAL PIGMENT

- Natural Level: 5 Light Brown/0% gray
- Target Color: Level 7 Medium Blonde with cool mahogany tones
- Undertone at Level 7: Orange
- Formula: 7NCh **Color Gels Oils** + 20 Volume **Pro-oxide** Cream Developer

FORMULATION EXAMPLE FOR COVERING GRAY WHILE LIGHTENING NATURAL PIGMENT

- Natural Level: 5 Light Brown/50% gray
- Target Color: Level 7 Medium Blonde with cool natural tones
- Undertone at Level 7: Orange
- Formula: 6NA + 8NA **Color Gels Oils** + 20 Volume **Pro-oxide** Cream Developer

GUIDELINES FOR COVERING GRAY

To cover gray means to minimize the contrast between natural hair and gray hair. To maintain the most control when covering gray, select a formula no more than two levels lighter than the natural hair. All **Color Gels Oils** shades have a brown to tan background and will cover up to 100% gray, except Clear. It is not necessary to mix shades with NN for coverage. Shades are named (level and tone) for their performance on white hair.

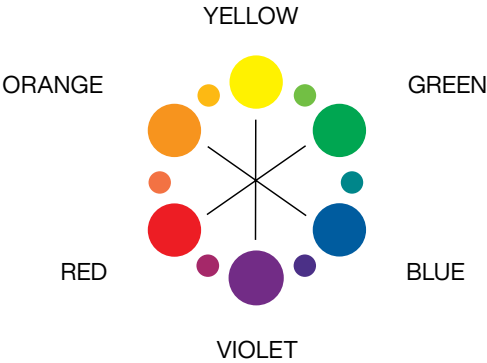

MONOCHROMATIC AND SATURATED

Monochrome colors are all the varieties of a single hue - the tints, shades, and tones. A monochromatic color scheme will range between lighter and darker versions of the base color or hue. Each **Color Gels Oils** family will follow a monochromatic color scheme, meaning there will be lighter or darker versions of the primary and/or secondary tone without tertiary or additional reflects in the background.

Color Gels Oils shades provide saturated, opaque gray coverage results. **Color Gels Oils** shades will appear saturated and full-bodied even on various percentages of gray.

DILUTION SOLUTION

Shades EQ shades can be diluted with a clear shade to lessen intensity or lighten the tone of any **Shades EQ** or **Shades EQ Bonder Inside** formula.

- **Shades EQ Gloss** Crystal Clear mixes with **Shades EQ** Processing Solution and **Shades EQ Gloss** to Gel Processing Solution for Precision Application
- **Shades EQ Bonder Inside** Crystal Clear adds enhanced shine and strength. **Shades EQ Bonder Inside** Crystal Clear should be mixed with **Shades EQ Bonder Inside** shades only, as mixing **Shades EQ Bonder Inside** clear with **Shades EQ** Crystal Clear or another toner will diminish the bonding effect.

COLOR CAMO

5-MINUTE CUSTOM GRAY CAMOUFLAGE

- Ammonia-free, permanent dye technology with demi-permanent results
- 6 shades in natural and ash families
- Use with Redken's 10 volume **Pro-oxide** Cream Developer

BENEFITS

- Ensures subtle, low maintenance results with no visible lift in hair that's 50% gray or less
- Gel-like viscosity adheres to coarse gray hair without dripping
- Fragrance is discrete for more pleasant application

PROCESSING TIME

- 5-minute processing time for gray blending*
- 10-minute processing time with dark shades**

DEVELOPER

Pro-oxide Cream Developer has a super smooth consistency for easy mixing and application, and provides predictable performance for all types of applications. Use **ONLY** the 10 volume with **Color Camo**.

SHADE SELECTION

- Select a shade in the same range as his natural (pigmented) color
- Pick the tone you want to see: **Ash** = gray + blue/violet, which provides a smoky result;
Natural = gray + green/gold, which provides a cool gold result

HOT TIP: To help ensure proper **Color Camo** shade selection, take the client's eyebrows into consideration. Men's brows are typically lighter than their hair, so this will help prevent you from selecting a color that is too dark.

SHADE COLLECTION

Color Camo shades are formulated with customized dyes for natural results.

	BEFORE COLOR CAMO	AFTER COLOR CAMO	
	STARTING RANGE (LEVEL)***	ASH TONE (GRAY + BLUE/VIOLET)	NATURAL TONE (GRAY + GREEN/GOLD)
		5 MIN.	5 MIN.
LIGHT	 light (levels 7 and higher) (50% gray)	 light ash	 light natural
MEDIUM	 medium (levels 4–6) (50% gray)	 medium ash	 medium natural
		10 MIN.	10 MIN.
DEFINE	 dark (level 4) (50% gray)	 dark ash	 dark natural

MIXING & PROCESSING

- Mix **Color Camo** with 10 volume **Pro-oxide** Cream Developer in a 1:1 ratio. **Once mixed, apply immediately to hair.**
- Apply to towel-dried hair using a bowl & brush or applicator bottle in ¼ inch partings.
- Start in the area where hair is the most gray—for most men it's the temple area or hairline.
Do not overlap with hair that has been previously colored.
- Process 5 minutes (darkest and black shades, process 10 minutes) at room temperature. Processing time begins immediately upon finishing the application or after the first 3 minutes from beginning the application.
- Rinse, shampoo and condition with the appropriate **Redken Brews** shampoo and conditioner.

NOTE: **Color Camo** is formulated to remain natural looking between services if used as directed. If darker ends result from repeated applications, you may only want to pull through the ends as needed for the last minute of processing.

RETOUCH APPLICATION

- Repeat steps 1–5, applying to the re-growth area.
- Rinse, shampoo and condition with the appropriate **Redken Brews** shampoo and conditioner.

*PROCESS FOR 10 MINUTES IF YOU WANT A DEEPER, DARKER RESULT
**DUE TO CONCENTRATION OF DYES
***ALWAYS USE COLOR CAMO WITH 10 VOLUME PRO-OXIDE CREAM DEVELOPER. COLOR CAMO IS DESIGNED TO MINIMIZE THE CONTRAST BETWEEN PIGMENTED AND NON-PIGMENTED (GRAY) HAIR
